

PRECISE MACHINE WORKS

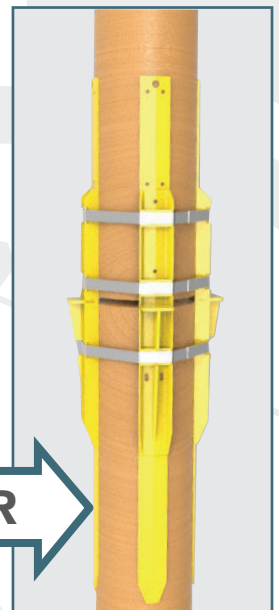

Groundline Repair System (GRS)

If a pole has ground rot, storm or vehicular damage, the GRS will restore the pole back to original specifications or better (as tested).

- Repair damaged poles quicker and easier with no special tools or equipment. Fast driving, minimal to no digging and re-usable.
- Ergonomically friendly install at ground level.
- The GRS weighs in at only 54 lbs. while maintaining durability and strength.
- 17'2" above ground test pole was cut through, had the GRS installed and was tested to withstand 166 mph winds.
- 40' pole with the GRS installed is calculated to withstand 90 mph winds. Independently Engineered and tested.
- Can be used with any banding.
